Mounting vapour control layer on pre-wall structures

1
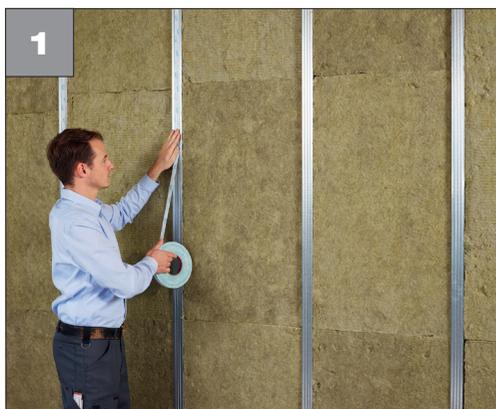

- Use double-sided adhesive Twinet when mounting vapour control layers on metal or timber substructures
- Avoids leaky stapling points

2

- Apply vapour control layer with the writing facing you

3
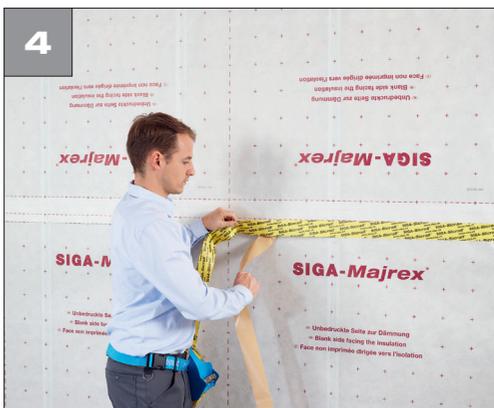

- Overlap the vapour control layer by approx. 10 cm

4

- Seal overlap with Sicrall avoiding tension and wrinkles

5

How it should look:

• Vapour control layer mounted on substructure and bonded to be permanently airtight
